excerpt from a manual of physical measurements this manual is an outline of the laboratory experiments given in the one year and the two year courses in general physics at the university of minnesota the laboratory work in these courses supplements the lectures and recitations and occupies one two hour period a week for two and four semesters

respectively the experiments given in a junior course of one semester in electrical measurements are also included in the section on electricity it is taken for granted that the student has acquired a general knowledge of a subject before it is considered in the laboratory and no attempt is made in the manual at completeness in subject matter or in explanations the work is done under the guidance of an instructor who furnishes any additional information necessary the student should feel that acceptable results depend upon his own ability to properly adjust the apparatus and he alone should plan and execute the details of the experiments subject of course to the criticism of the instructor we here wish to thank prof j zeleny and mr paul e klopsteg for valuable suggestions criticisms and assistance during the preparation of this manual about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from a manual of physical measurements the close attention to every detail and the exercise of deliberate judgment which are required in every experiment if a worthy result is to be obtained tend to produce a habit of accuracy which is of inestimable value this training is obtained only when every effort is made to get the very best result that the time allowed for the experiment and the apparatus employed will permit before observations on any experiment are begun the theory of the experiment should be mastered as well as the functions of the various parts of the apparatus which is to be used without such study necessary observations may be omitted or taken in the wrong way and apparatus whose value depends upon its accuracy may be injured permanently because of a lack of knowledge about its delicate parts furthermore it is important to determine the degree of accuracy of every result which is obtained errors for various reasons it is impossible to obtain the absolute value of an unknown quantity any measurement is affected to a greater or less extent by errors which may be classified under the two heads constant and accidental as examples of constant errors may be mentioned the following about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from laboratory manual of physical chemistry in presenting this manual of laboratory exercises in physical chemistry the authors have been prompted by a threefold

object first to facilitate the task of the instructor in handling large classes of students beginning a course of practical physical chemistry second to assist the student in recording his observations in a clear and comprehensive manner and third to present such quantitative exercises as will be particularly desirable in the training of students of engineering in view of the fact that there are as a rule available for laboratory work not more than two and one half hours at a time it has been found desirable to have the different pieces of apparatus set up beforehand by the instructor to this end each experiment is preceded by an exact list of the apparatus and chemicals needed it is believed that this will materially aid the instructor in assembling the necessary equipment at the rensselaer polytechnic institute the laboratory course immediately follows the completion of the theoretical course in physical chemistry and students are thus prepared to take up the study of any experiment herein listed it is therefore found practical to prepare the equipment for one or two units of each exercise before the laboratory course starts and to shift the student successively from one experiment to another in this way an excessive amount of preparatory work is avoided many of the experiments have been in use in their present form at this institute and elsewhere for a number of years and have been found to be thoroughly satisfactory directions have been made as concise as possible about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
